DETAILED ACTION

Claim Objections

Claims 1 and 12 are objected to because of the following informalities:

1. Regarding claim 1 – Line 1, in order to avoid 101 issues the examiner recommends amending "machine" to -- computer --.
2. Regarding claim 12 – Lines 1 and 3, in order to avoid 101 issues the examiner recommends amending "machine" to -- computer --.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Oechsle (US 5,570,466).

Art Unit: 2616

1. Regarding claim 1 – Oechsle discloses receiving a routing address comprising at least two routing identifiers, refer to Figure 2 and column 3 line 57 to column 4 line 13 and column 5 lines 13 to 40.

Oechsle discloses building a routing matrix to use in determining route identification operations to be performed, the routing matrix identifying one or more of the at least two routing identifiers that are to be used in routing, refer to Figures 1 and 2 and 3 and column 4 line 40 to column 5 line 40.

2. Regarding claim 2 - Oechsle discloses the routing address comprises a destination address, and wherein building the routing matrix comprises comparing the destination address with a source address to identify a difference, refer to Figures 2 and 3 and column 8 lines 25 to 45 and column 10 lines 20 to 40.

3. Regarding claim 24 - Oechsle discloses a processor and means for receiving a source address and a destination address, each comprising at least two routing identifiers and means for using the processor to identify one or more differences between the source address routing identifiers and the destination address routing identifiers and means for determining a set of route identification operations based upon the one or more differences, wherein a different route identification operation is determined for each of the one or more differences and means for routing data based upon the set of route identification operations, refer to Figures 1 and 2 and 3 and column 3 line 57 to column 4 line 13 and column 5 lines 13 to 40 and column 8 lines 25 to 45 and column 10 lines 20 to 40.

Allowable Subject Matter

Claims 12-23 are allowable over the prior art of record.

Claims 3-11 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. Nickolls et al. (US 5,598,408) discloses a scalable processor to processor and processor to I/O interconnection network and method for parallel processing arrays.
